

Leg Tunnel

Added Feature

Easily secure tunnel to bed with straps

Leg Tunnel 2

A portable lateral leg positioning device that is easy to use and provides the surgeon with a stable working platform

- A consistent, strong surface for lower extremity cases in the lateral position
- Can be used for Bone Grafting and ORIF of Calcaneal FX, Posterior Wall Acetabular Fractures

“The leg tunnel creates a stable, flat, predictable surface on which to work, with plenty of mobility for imaging away from the down leg.”
