Anterior hip trends suggest from 2009-2018, the use of DA THA approach increased by 28%, while posterior approach decreased by 18%*

Bone Foam’s new tabletop system simplifies patient positioning for anterior hip replacement on any operative table.

- Consistent, repeatable, and stable pelvic positioning easily mastered by all OR staff
- Reduces hospital cost with reusable postless design
- Increases surgical access to the acetabulum with removable hip bolsters
- Decreases OR prep time with an efficient method for patient positioning

An innovative tabletop system that consistently and accurately positions patients for anterior hip arthroplasty.

The postless design reduces injury risk to the perineum while stabilizing the pelvis and torso. The Hippy has bilateral removable hip bolsters which improves surgical access to the acetabulum and creates a stable pelvis for cup impaction. Memory foam padding and base contour safely cradles the patient throughout the case.

The Hippy allows dynamic motion of the hip and facilitates intraoperative assessment of the stability, impingement, and ROM during direct anterior hip procedures.

**Elevated Non-Operative Leg**
Optional add-on that includes Bone Foam Mayo Band™ for surgeons who prefer to elevate the non-operative leg on a Mayo stand.

**Postless Distraction**
Advanced foam torso cavity integrated into a multilayer foam base piece cradles and stabilizes the patient’s torso, providing counter traction during distraction without the use of a post.

**Pelvis Stabilization**
Stable and consistent positioning for patients of all sizes.

**Surgical Site Access**
The innovative removable hip bolster design improves access to the pelvis and is removed after intubation for acetabular preparation and cup impaction.

**Complete Anterior Positioning System Includes:**

- **Torso Base with 2 Removable Hip Bolsters**
- **Leg Board**
  Adjustable peg board design allows for multiple leg configurations during surgery.
- **4 Padded Peg Board Posts**
  Padded foam posts protect soft tissues and nerves.
- **2 Disposable Single Arm Supports with Straps**
  Two-piece base and shell design that safely stabilizes the arm across the chest. Adjustable straps to secure the arm in a desired position.
  Reorder: #925.SAS
- **3 Table Straps**
  Adjustable straps to secure the base and leg board to the OR table.
